

SAI TEJA BHOOMRAOGARI

SOFTWARE ENGINEER

Austin, TX · saitejabhoomraogari1508@gmail.com · linkedin.com/in/saitejapro · github.com/saiteja-pro

SUMMARY

Software engineer running a one-person platform function for a 30-engineer organization, building the internal tooling that keeps releases stable and engineers productive. Works mostly in Python across AWS and Azure DevOps, and owns each tool from its first commit through production support, including the Terraform beneath it and the tests that catch bugs before they ship. Most of the work sits in automation, CI/CD, ETL, and the infrastructure fixes that quietly remove manual steps for good.

PROFESSIONAL EXPERIENCE

Software Engineer | SAIF Corporation

Nov 2022 – Present

Remote

- Built and owned the Python data-validation and ETL framework that audited policyholder, payroll, and claims data for 53,000+ active policyholders and roughly 37,000 claims a year, catching schema and integrity errors before release rather than in production.
- Developed the backend services and ETL jobs behind those workflows, including the API integrations that moved operational and analytical data between systems.
- Wrote a Jinja code generator that produced ready-to-run unit test templates across 20 to 25 APIs, saving 6 to 8 hours per suite, ending repetitive boilerplate, and earning adoption from 15 engineers.
- Delivered a one-click smoke test runner with a self-serve UI that let any engineer run any test on demand, not just at deploy time, cutting about an hour of manual validation per run across twice-weekly releases.
- Led the GitLab to Azure DevOps migration end to end, moving 5 repositories and 35 pipelines in a single week with no interruption to delivery.
- Shipped an alert snooze manager that muted known escalations for defined windows with a logged reason, cutting false and known-issue alert noise by 40% for on-call engineers and stakeholders.
- Created a certificate renewal validation tool that tracked 29 certificates on a fixed cadence and alerted 15 days before expiry, removing the scramble of surprise expirations.
- Provisioned the AWS environment (S3, RDS, Lambda) with Terraform for reproducible, version-controlled infrastructure, and containerized services with Docker for consistent behavior from development to production.
- Rolled out Sauce Labs across the team and onboarded 30 engineers, standardizing automated test execution across the organization.
- Instrumented the platform with logging, monitoring, and alerting, and built the dashboards the team used to track production health.
- Contributed to architecture and sprint-planning discussions, weighed design trade-offs, and wrote the technical documentation, including data-flow diagrams and release notes, that the team worked from.
- Operated as the sole platform engineer, guiding 30 engineers across teams on test automation, CI/CD, and internal tooling.

Graduate Research & Teaching Assistant | UT Arlington

Apr 2022 – Aug 2022

Arlington, TX

- Taught business statistics and analytics coursework and supported faculty in delivering it.
- Supported research on how businesses adopt analytics and what makes those rollouts succeed or stall.
- Coached graduate students through data analysis and the statistical tools they used.

Kindle Direct Publishing Analyst | Amazon

Feb 2021 – Jul 2021

Hyderabad, India

- Reviewed publishing workflows and content-quality metrics for Kindle Direct Publishing.
- Flagged recurring process gaps that fed into improvements for the digital content pipeline.

Device, Digital & Alexa Support | Amazon

Aug 2019 – Jan 2021

Hyderabad, India

- Provided technical support across Amazon's device and digital services.
- Resolved escalated troubleshooting cases across Alexa, Kindle, and Fire devices that moved past the first support tiers.

Business Analyst Intern | Mavensoft Technologies

Aug 2018 – Jul 2019

Hyderabad, India

- Gathered and documented business requirements for technology projects.
- Supported client-facing analysis and reporting.

PROJECTS

DealEdge: AI Negotiation War Room

3rd of 12 teams, SAIF IT Hackathon 2026

Built an AI negotiation coach solo, with strategy briefs, an interactive roleplay mode, and live voice-to-voice practice. *Next.js, React, TypeScript, OpenAI API, speech-to-text*

NLP Summarization Engine

UT Arlington capstone

Built an end-to-end pipeline that scraped roughly 12,000 companies and ran the data through a fine-tuned NLP model to generate concise business summaries. *Python, HuggingFace, Selenium, Pandas*

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, TypeScript

Backend: REST APIs, Python automation, Flask, Django, ETL pipelines, microservices, unit and integration testing, Jinja2

Cloud & Infrastructure: AWS (S3, RDS, Lambda), Terraform (IaC), Docker

DevOps & CI/CD: Azure DevOps, GitLab CI, Jenkins, Sauce Labs, smoke and regression testing, release automation

Reliability & Data: Monitoring, logging, alerting, incident response, root cause analysis, Pandas

Collaboration: Agile, sprint planning, technical documentation, code review, mentoring

EDUCATION

M.S., Business Statistics

2021 – 2022

University of Texas at Arlington, College of Business

B.Tech, Electrical & Electronics Engineering

2015 – 2019

Jawaharlal Nehru Technological University
